Fixes for zigu APP

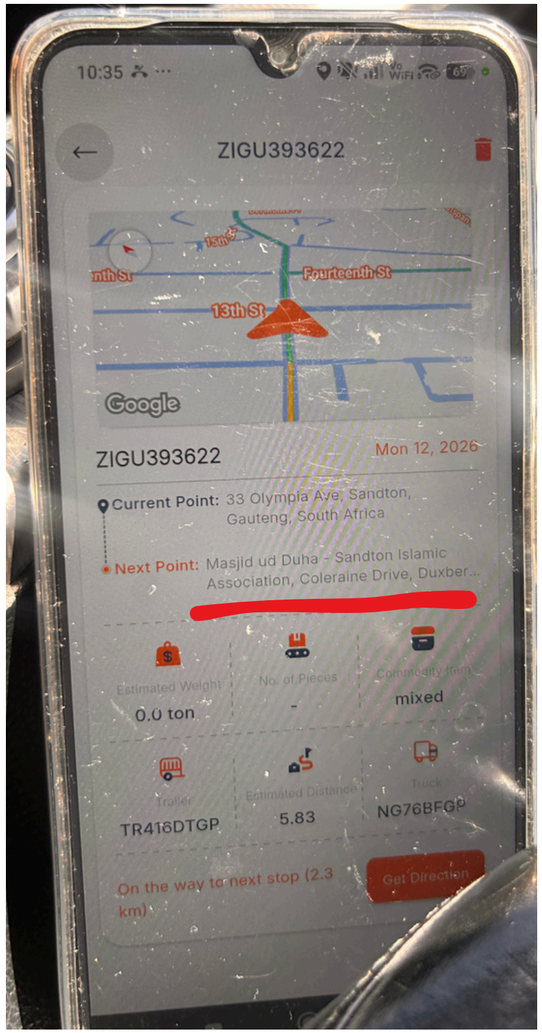

Ok this is the start of the trip, the trip has 2 stops and a final destination. so this is at the start of the trip

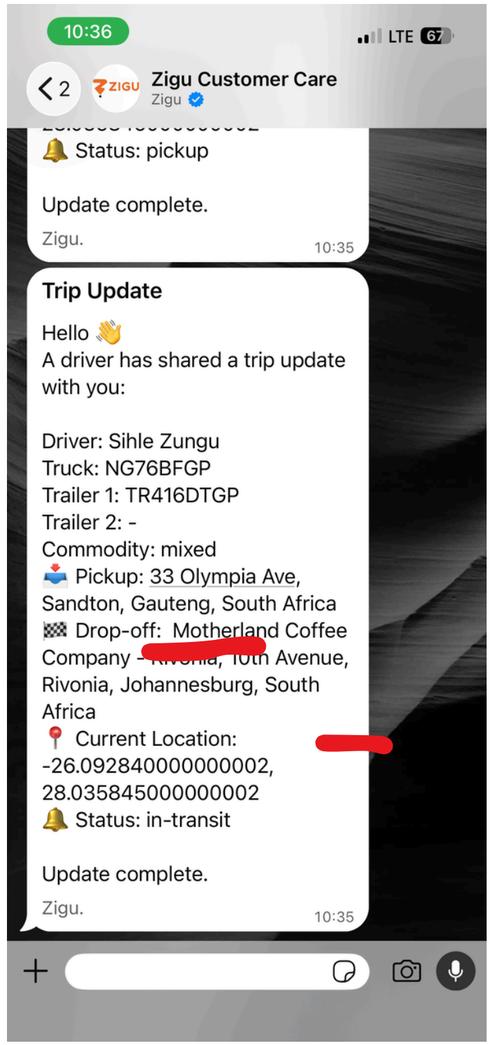

current location is just coordinates that doesnt help. the drop off is showing the end location.

Fixes for zigu APP

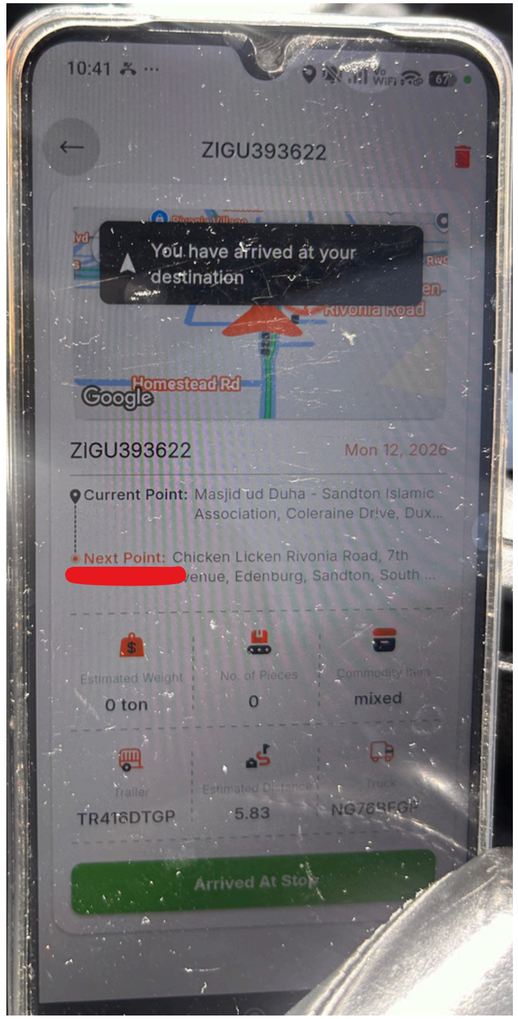

The starting point has been left and it's now shoing the first stop.

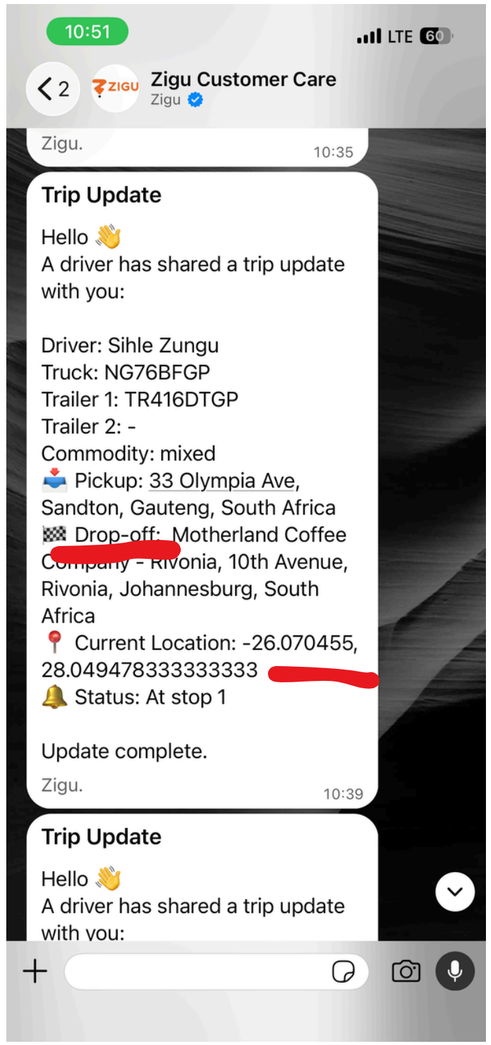

The issue now is the whats app is still showing the same end point but as you can see the app has updated the stop. but not the WhatsApp. the current location also doesnt help coz its just coordinates. the most difficult part is that you cant even click into the cooridniates to access and see where the vehicle is.

Fixes for zigu APP

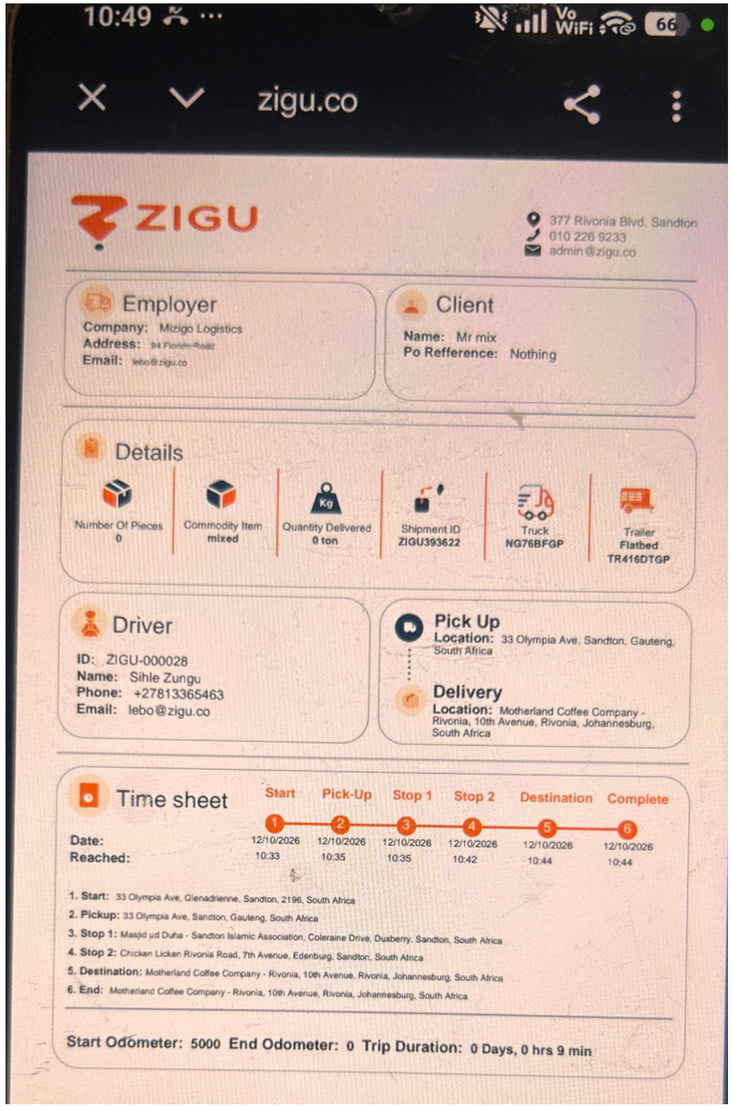

SO we have moved to 2nd stop now. APP is workign perfectly well here. its now functioning properly and moving between locations and stages with no bugs.

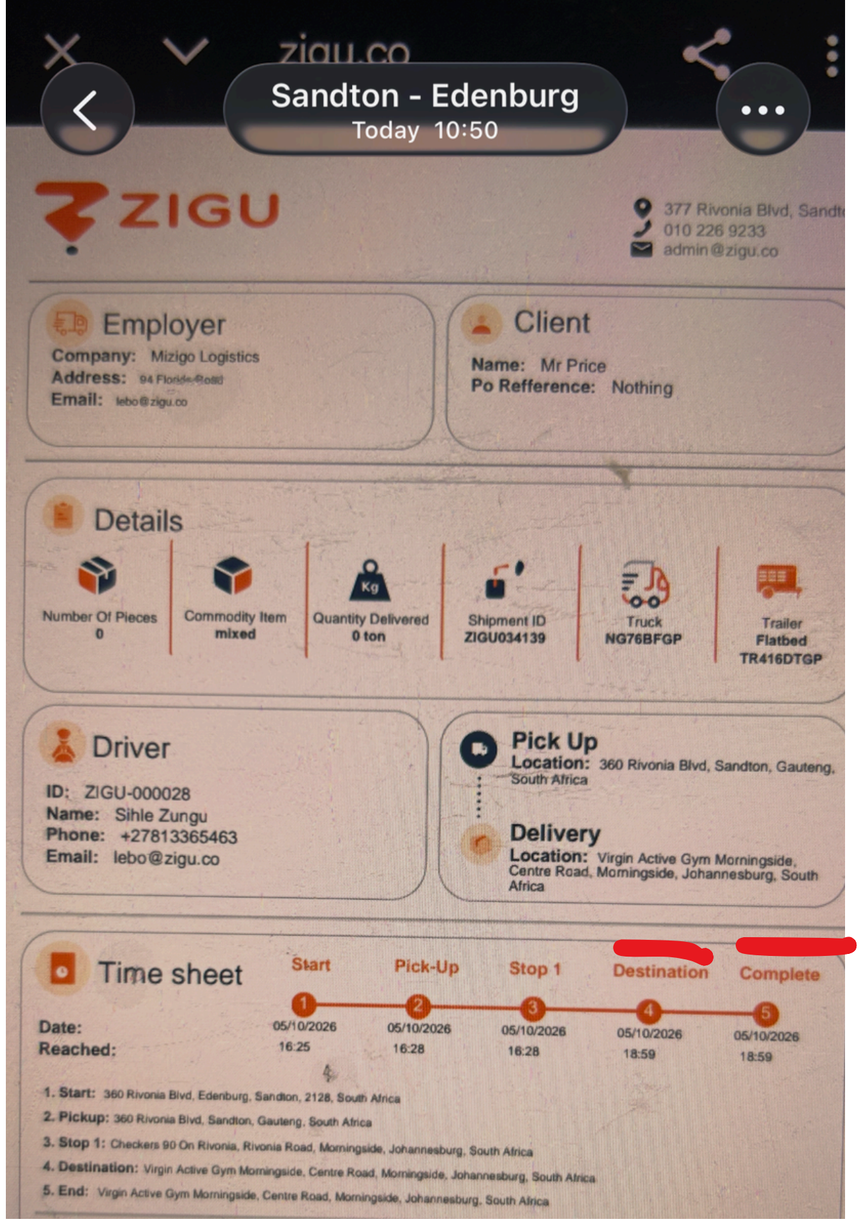

The issue is location still showing smae drop off but we have moved to a different location again and same issue with the cirrent location

Fixes for zigu APP

End of trip all the stops are shwoing up perfectly on the report. The start pick up location, stop 1 stop 2 and destination. it is all working perfectly well.

An issue we need to resolve with accuracy here.

on this trip the destination and complete times are not actually accurate. I arrived at this destination about over 2 hours before. this was me going to gym. I arrived there around 16.45 this was me going to gym. I closed the trip when I left gym.

but the report is showint destination and complete for the same time 18:59 which isnt True I had arrived much earlier but it shows different times. That needs to be resolved as drivers need to be able to show a difference between when they arrive at a place and when they close a trip. as you can see the start and pick up times are different. I will test this again ahd see if the same error happens but its worth showing the matter brcause its an imprtant fix if its a bug.
